汇报讲稿最终版

这份讲稿的初稿已经非常清晰地抓住了核心逻辑和数据。为了更契合正式的汇报场景，我对中文表达的连贯性和专业度进行了润色，并提供了一份符合外企汇报习惯、严谨且流畅的英文讲稿。

中文汇报讲稿

第一页 PPT 讲稿

- 本次 CW03 2026 BKM 专项会议已原则上审议通过了导入日本进口 AQ160 变速箱的整体方案 [cite: 9]。
- 会上同步对比了两种从上海至仪征（CPY）的内陆物流配送模式 [cite: 9, 10]：
  - **方案一**为从上海港直送仪征工厂 [cite: 10]。
  - **方案二**采用标准流程，经安亭仓库进行中转配送 [cite: 10, 24, 25]。
- 综合整体成本与经济性测算，我们优先推荐方案一，即直送模式 [cite: 10, 21]。

第二页 PPT 讲稿

- 在 BKM 会议原方案一的基础上，我们进一步落地了两项降本优化措施 [cite: 35]：
  - 一是优化了空料架的回流路径，调整为由仪征直送上海港，单台节约成本 0.3 元 [cite: 33]。
  - 二是依托全程直达运输，取消了安亭仓库的入库与中转操作，单台进一步降本 0.64 元 [cite: 33]。
- 在运输节奏上我们也进行了同步优化：通过充分利用港口 4 天的免堆存期以及一阶优惠费率，实行分批次均衡发运，每日发运量控制在 2 至 4 个集装箱 [cite: 22, 33, 222, 227]。
- 按五月份首批进口量测算，仪征工厂仓库的峰值占用面积将由 246 平方米缩减至 141 平方米，降幅达 43%，有效缓解了工厂的库存周转压力 [cite: 33]。
- 针对方案一潜在的属地商检查验风险，我们已提前与海关对接确认 [cite: 33]。属地海关将在货物到厂后 3 个工作日内完成上门查验，这完全能够保障产线的正常运转，消除断供隐患 [cite: 33]。
- 综上所述，经过对运输路径、仓储及操作节奏的全方位优化，相较于 BKM 会议的初始版本，方案一的单台整体成本进一步下降了 0.94 元，实现了降本、提效与稳供应的多重收益 [cite: 33, 35]。

英文汇报讲稿 (English Presentation Script)

Page 1

- The recent CW03 2026 Special BKM Meeting has approved in principle the overall plan to implement the Japanese-spec AQ160 transmission [cite: 9].
- During the meeting, we evaluated two inland logistics solutions from Shanghai to Yizheng [cite: 9, 10]:
  - **Concept 1** involves direct delivery from the Shanghai Port to the CPY plant [cite: 10].
  - **Concept 2** utilizes the standard process, routing deliveries through the Anting warehouse [cite: 10, 24, 25].
- Based on our comprehensive economic assessment, we highly recommend proceeding with Concept 1, the direct delivery model [cite: 10, 21].

Page 2

- Building upon the original Concept 1 presented at the BKM meeting, we have secured two additional cost-saving measures [cite: 35]:
  - First, we optimized the empty rack return route to a direct delivery from CPY to the Shanghai Port, yielding a saving of 0.3 RMB per set [cite: 33].
  - Second, by eliminating the Anting warehouse operations entirely, we achieved an additional cost reduction of 0.64 RMB per set [cite: 33].
- Furthermore, we have optimized the delivery rhythm. By maximizing the port's 4-day free storage period and utilizing first-tier storage rates, we will implement a phased delivery approach, dispatching a controlled maximum of 2 to 4 containers per day [cite: 22, 33, 222, 227].
- Based on the first batch in May, the peak storage area requirement will be reduced from 246 square meters to 141 square meters [cite: 33]. This represents a 43% reduction that significantly eases inventory pressure at CPY [cite: 33].
- Finally, regarding the potential risk of local customs inspections under Concept 1, we have proactively confirmed with Customs that any local inspection will be completed within 3 working days [cite: 33]. This guarantees that our production lines remain fully operational without any disruption [cite: 33].
- In conclusion, compared to the initial Concept 1, these measures reduce the overall cost by an additional 0.94 RMB per set, successfully optimizing both cost and operational efficiency while ensuring a stable supply [cite: 33, 35].
